

*PCs have never
been so easy!*

Nor have they been this powerful. You've been hearing about the easy-to-use Sun Moon Star 386SX, so you know it comes already loaded with ready-to-run business software *and* a three-year warranty — the longest of any manufacturer.

Now it's even easier to use. Shown is the Sun Moon Star running Microsoft Windows®, the PC system management program that'll help take you through 2001 — *and beyond!*

You can see in the photo how Windows displays your software programs and files as symbols, called "icons". Several may be running at the same time, ready for instant use! At any moment, simply choose those applications you want to use by enlarging them with a click of the mouse. Programs can even run side-by-side, enabling you to easily "cut and paste" text, data and graphics from one to another.

With Windows, you may never be bothered by confusing DOS prompts and commands again. But seeing is believing — call Crossover to get a free Windows 3.0 demo diskette. Quickly discover how Windows opens doors.
